EXPERIENCES

Full-Stack Engineer

PioneerDev AI

March 2026 – Present

Colorado, United States

- Shipped production features end to end across a multimodal AI creative studio generating image, video, and audio, working within an established multi-provider and async-job architecture.
- Used Sentry trace waterfalls to surface N+1 queries and API bottlenecks, then resolved each through Prisma optimization, PostgreSQL indexing, or Redis caching.
- Hardened realtime and polling-based tracking for queued AI-generation jobs, adding session-resume reconciliation to clear stuck pending states and surface failed or missing jobs after tab switches.
- Replaced inline base64 media inputs with direct-to-R2 uploads, passing providers hosted URLs to avoid Cloudflare Worker memory limits on large image and video payloads.
- Built an Influencer Studio profile that injects persona context into image, video, and audio generation so every output carries the influencer's look and personality, with support for content packs and AI captions tunable by length and tone.
- Engineered batch image generation that fans out a single request into parallel AI image-generation jobs across multiple creative categories, with real-time per-slot progress tracking.

Full-Stack Developer

AppQuant Technologies Inc.

May 2025 – February 2026

Pasig, Philippines

- Owned the architecture and end-to-end delivery of a multi-tenant AI CRM, integrating ElevenLabs for live outbound phone calls and OpenAI for post-call analysis and follow-up suggestions.
- Built a server-side document generation pipeline rendering quotations, invoices, and sales presentations to PDFs via Puppeteer and React-PDF, exposed through tokenized short-URL links so clients could view and accept documents without an account.
- Built a secure Stripe payment pipeline with idempotent webhook processing and credit transactions, plus subscription lifecycle handling for upgrades, cancellations, and failed-payment recovery.
- Built an email workflow with Resend and React Email for branded CRM communication, enabling attachments, quote/invoice CTAs, AI-assisted sending, and delivery engagement tracking.
- Hardened multi-tenant data access by enforcing Supabase Row-Level Security (RLS) at the database layer and adding application-level tenant gating for active-workspace validation and request scoping.
- Co-located Vercel serverless functions with the Supabase database region, reducing network round-trip latency and improving API response times.
- Delivered the real-time messaging system for a dating platform, combining Supabase realtime presence, WebRTC voice/video calls, and disappearing voice/photo/video messages, with a Stripe-backed freemium model enforcing daily browse quotas and premium subscriptions.

SKILLS

Languages: TypeScript, JavaScript, Python, SQL, PostgreSQL, MySQL

Frontend: Next.js, React.js, Astro, HTML, CSS, Tailwind CSS, TanStack, Zustand

Backend: Next.js, Nest.js, FastAPI, Express.js, Node.js, Prisma, Supabase, Redis, RBAC, REST API, tRPC

DevOps & Infra: Docker, GitHub Actions, Vercel, AWS, Cloudflare, Infisical, Sentry

Tools & AI: Git, Claude Code, Codex, MCP, Figma, Linear, Postman

EDUCATION

Bachelor of Science in Computer Science

Bataan Peninsula State University – Main Campus

September 2021 – August 2025

Bataan, Philippines
